Screening Buckets SB Series

The « SB » Series Screening Bucket with oscillating grills is a type of equipment commonly used for screening demolition material and quarry residues, as well as for the reclaiming of rocky ground.

The material is screened using the innovative vibrating-alternating movement of the screens fitted longitudinally inside the bucket.

Thanks to the vast range of screen size available and their interchangeability, the same model of bucket can be used to screen materials of different sizes.

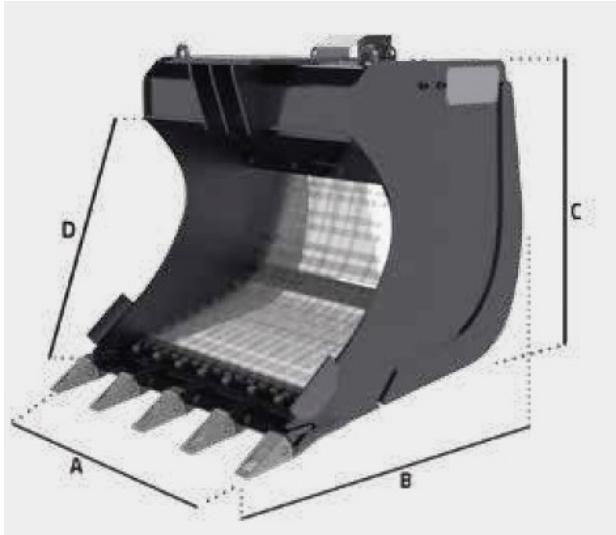

Screening Buckets - SB Series

Rotary Screening Buckets - SR Series

TRAMAC reserves the right to change or discontinue models and/or specifications without prior notice.

Quality and dependability: two features you can count on with every TRAMAC product.

All TRAMAC products are engineered for superior performance, manufactured to the most exacting specifications, and—within the guidelines of the industry's most rigid quality control program—thoroughly inspected at every stage of production. All working parts are precision-machined to the closest tolerances, and all materials meet or exceed the highest industry standards. These are but a few of the many vital reasons major contractors worldwide choose our products.

They know that with TRAMAC, reliability is crucial; a basic component conscientiously built into every unit that bears our name.
